

GUIDED WAVE TESTING

Focus your inspection dollars on fixing problems, not finding them

Team's advanced Guided Wave Inspection services enable you to locate pipe defects above and below ground without disruption of service. We specialize in pinpointing:

- Internal/external corrosion
- Earth/wall penetration
- Pipe support corrosion
- Corrosion under insulation
- Defects at soil to air interface
- Flow accelerated corrosion

Features

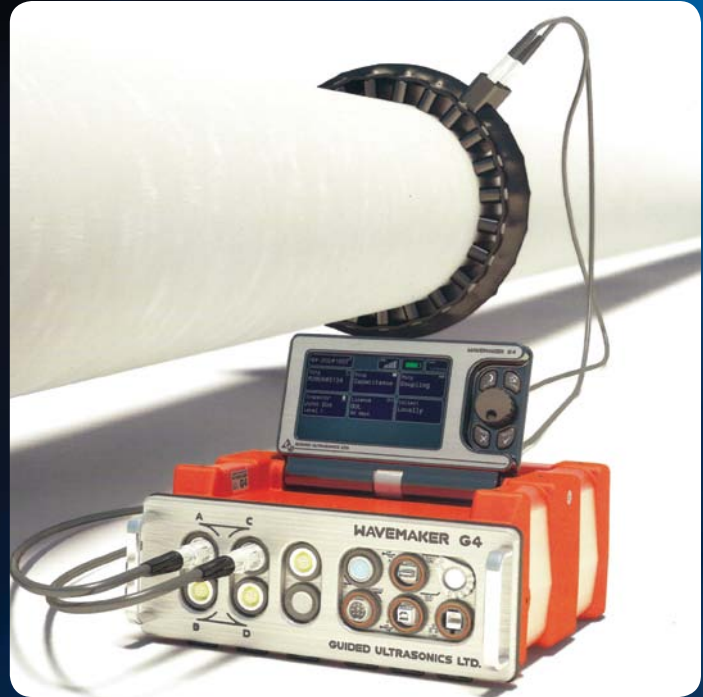

Team's guided wave equipment is portable and sets up quickly.

- Test pipes from 2" to 60" OD
- Bilateral testing of ranges up to 300'
- Clamp-on or inflatable collar
- Identifies welds and attachments
- Detects internal or external corrosion

Benefits

Save time and avoid costly shut downs using Team's guided wave inspection.

- Requires only 16" or less of exposed pipe to install
- Isolates problem areas for pinpoint excavation
- Minimal setup time
- Test can be performed while piping is in-service
- Provides full coverage screening of the pipe
